

समय ठीक से निकल गया तो,

मन धन धन पढ़ता रहेगा ...

So, by the end of this August '26, I would be completing four years in this company.

This sets off too many alarms for me, as I never imagined, never planned that I would stay here this long enough.

But anyways, here we are and I'm not going to press snooze this time.

The timeline this time is pretty simple, follow along Scalen for DSA grip and coding shuttle for Spring Boot / backend mastery

DSA → 3-4 months from 11th May '26

Coding Shuttle → 3+ months from 23rd May '26

So, they finish up closely at around the same time, approximately near about the month of August, which is exactly when my 4 years will also be up ...

I am taking this timing as a signal from the universe.

Just have to really, really lock in and be consistent.

Best Case Scenario

→ before DSA starts → finish LLD I module from Scalen
+

Revise all DSA questions till that lecture

→ begin coding shuttle starts → finish till LLD II module from scaler

Core Track

- DSA (P1)
- LLD module (P2)

Hobby Track → only if core track is on schedule, and you have time & energy to spare

- Rust
- Operating System

Time Table (Best case Draft)

- 2 hours morning DSA
- 2 hours morning LLD
- In b/w office → LLD / Revision
- Post office → Revision / hobby track (1+ hour/s)
